Easilys 0.735.0

2026-01-27 11:51:16

General

- Features:
  - #10954: 🔧 Add origin data to SupplierProductFlat.
  - #11059: ⛔ Added the "My profile" page to the navigation under user tab.
- Bug fixes:
  - #11220: Hide Crisp default chat bubble and route chat opening through the footer/help buttons to avoid overlap and misclicks.
  - #11177: 🔧 Migration to increase username maximum length from 30 to 60 characters error fixed.
  - #11556: 🔧 Fix a security issue.
  - #11562: 🔧 Deactivation of the check to ensure that product IDs belong to a range of identifiers theoretically reserved for industrial products from the OASYS product database (this check prevented any product updates).

Sites

Rights Management v2

- Features:
  - #10718: ⛔ The ability to save changes made to a profile's actions has been added.
  - Right "Update actions by profile" has been added

Products

Products administration

- Bug fixes:
  - #11068: The default origin when creating a product is now Unknown. Unknown origin can't be deleted.

Suppliers

- Bug fixes:
  - #11074: It is no longer possible to modify the 'External process used to validate orders' and "External process for validating supplier invoices" options for a inherited supplier.

Customers

Customer contracts

- Features:
  - #10967: ⛔ Added the linked contract sites /customer-contract-sites/:idCustomerContract list API.

Order cutoff schedules

- Features:
  - #10975 : ⛔ Add list API /order-cutoff-schedule/default/site/:idSite to list MealTypes and their default order cutoff schedules.

Menus

Smart Selection®

- Features:
  - #11090: ✔ Addition of the 'Origins' criterion to the Smart Selection® rules. This criterion is not yet taken into account in the calculations.

Menu pre-design

- Features:
  - #18668: ✔ The list of menu frames can now be sorted by name, start date, end date and status. By default, frames are listed in descending order by start date. Frames for future periods are therefore visible at the top of the list by default.
  - #18596: ✔ Moving any recipe to any different menu item is now available.
  - #10957: ✔ Display of the recipe price in the simulation analysis context menu after the simulation has been launched.

Guest orders

Guest orders

- Features:
  - #11028: 🔧 Added replaceExistingQuantities query parameter to the /customer-order/recipes API to replace existing menu quantities with incoming order values only, ignoring existing quantities.

Supplier orders

Supplier orders

- Features:

- o #10741 : ✔ Supplier order templates can now be inherited by child sites. When a template is defined as inherited on a parent site (checkbox option), it is automatically visible on all of its child sites, without the possibility of local modification. Any updates made on the parent site are immediately visible on the child sites.

Receptions
- Features:
  - o #11048: ✔ Adding some fields in receipt timestamp API.

Claims
- Bug fixes:
  - o #10727: 🖉 Add status filter and add email field for the new api to list claim from timestamps

Stock

Stock transfer
- Bug fixes:
  - o #11134: Now we filter children sites by the stock transfer tag defined in current site.

Tools

Imports / Exports
- Features:
  - o #10937: 🖉 Invoice import now retrieves existing supplier products by reference, ean and extId.

Interfaces
- Features:
  - o #18737: ✔ Orion interface allow all non analytical groups to be added as costs on an invoice
- Bug fixes:
  - o #18738: 🖉 Orion's "Service Fait" are now always sent with the "Certified" constatation status

Mapal OS
- Features:
  - o #11025: ✔ Keep 'Address' label editable when MOS is master
