

Easily 0.740.1

2026-02-09 15:51:49

The changes and bugs corrected in versions 0.740.0 is included in this version.

General

- Features:
 - #12851:  Update ideos to 5.23.0 to add observability conventions.
- Bug fixes:
 - #11158: Improved performance when deleting stock movements (such as reopening an inventory): from 33 seconds to 54 milliseconds for 475 movements.

Sites

Information

- Features:
 - #11523:  Addition of a local currency per site, visible in the site settings but not manageable from the application (modification only via API/technical import). This currency is now exposed in the API (get/sites, get/site and Menu responses) and the prices returned include the currency code (e.g. EUR, XPF) as well as the associated amount.

Site settings

- Features:
 - #11082:  Add configuration for POS products flow re-routing rules.
 - #10626:  Instead of immediately changing the site position, the system schedules it for the night. A technical action (activation of a job) is required for this function to be implemented.

Rights Management v2 BETA screen, not available yet

- Features:
 - #11612:  It is now possible to manage the visibility of pages.
 - #11037:  Added a new option allowing rights to be exported to a CSV file in order to reused in another environment.

Equipment items

Suppliers

- Features:
 - #10740:  Add link site and supplier by SIRET field in deliveries API POST

Customers

Customer contracts BETA screen, not available yet

- Features:
 - #10638:  Added the linked contract services /customer-contract-services/:idCustomerContract list API.
 - #10562:  Added the list screen of Customer contracts' sites section.

Order cutoff schedules BETA screen, not available yet

- Features:
 - #10745:  Add edit API /order-cutoff-schedule/default/site/:idSite/mealtype/:idMealType to create or edit a default order cutoff schedule.
 - #10744:  Added the list of default order cutoff schedules by meal type in the screen.

Sales

POS data

- Bug fixes:
 - #11573: The admin-only endpoint to delete POS products mapped to empty recipes now works as intended.

Menus

Menus

- Features:
 - #11523:  Addition of a local currency per site, visible in the site settings but not manageable from the application (modification only via API/technical import). This currency is now exposed in the API (get/sites, get/site and Menu responses) and the prices returned include the currency code (e.g. EUR, XPF) as well as the associated amount.
- Bug fixes:
 - #11228:  Fix menu cost computation during JOB_COMPUTE_MENU_ELEMENT_COST to include non-food items in totals while keeping nutritional values limited to food products.

Smart Selection®

- Bug fixes:
 - #11623:  Smart selection now correctly applies origin-based preference rules.
 - #11576:  When the preference label is not available, it is displayed as extId_ or id_. This prevents an empty list of rules from being displayed when rules do exist.

- #11654: Updated origin preference icon from map-marker to flag icon (fas fa-flag) and added CSS styling for tag-origin.

Menu pre-design

- Features:
 - #11681: ⚠️ (first step) a summary overview of the recipe composition and its allergens can be displayed by clicking on the eye icon on the recipe in the contextual analysis panel after simulation. The ergonomics and performance of this panel will be improved in a future version.
- Bug fixes:
 - #18666: ✅ Improving the column size of the menu pre-design list table.

Supplier orders

Supplier orders

- Bug fixes:
 - #12914: ✅ Fix: When creating an order from a legacy template, the order is now correctly created.

Claims

- Features:
 - #11685: ✅ Add new field orderCommitmentReference into claims/from API.

Invoices

- Bug fixes:
 - #11572 : Fixed an issue where Supplier Invoice modification was incorrectly blocked even when the option Delivery note also constitutes the supplier invoice was disabled.
 - #11572 : Update API check option Delivery note also constitutes the supplier invoice to match front ones.

Production

Finished Product Production Plan

- Bug fixes:
 - #11014: ✅ Information in the tiles is shown now in a correct way - units (pieces, etc.) and kilograms.

Production management

- Features:
 - #10893: ✅ Allow manual editing of the Use-by Date (DLC) field before adding to stock

Shipment

Site supply

- Features:
 - #10729: ✅ It's now possible to select existing stock batches to be shipped during the shipment process.

Stock

Known losses and markdowns

- Features:
 - #11079: ✅ It is now possible to delete a loss reason. The loss reason will be deleted if it is not associated with any losses, or deactivated if losses exist.
 - #11655: ✅ It is now possible to launch the destocking process from the user interface with a right. The destocked losses correspond to the current filters applied in the user interface. The user that has launched the process and the destocking date are saved and can be shown in the table.

Tools

Imports / Exports

- Features:
 - #11664: ✅ Sales receipt lines: the priceSalesReceiptElement field is not required anymore.
 - #10909: ❌ POS products: apply POS products rerouting rules defined in site settings.
- Bug fixes:
 - #11145: 🛠 Split the large file into chunks and also improve the error message.
 - #11684: Sites import: detect circular references of parent/child sites and prevent timeout when a circular reference contains a duplicated extId.
