

Easily 0.745

2026-02-24 15:12:05

General

- Features:
 - #18649:  Generate bundle putting the token in the header and avoid using cookie for the access token. Only for integration with MOS when isFullMosLoginFeature is enabled.

Sites

Site settings

- Features:
 - #11618:  Addition of a new standard setting allowing users to redirect the POS product feed to a target site themselves, without any specific development.

Rights Management *BETA screen, not available yet*

- Features:
 - #11618:  Display of the module icon before the module name in the Rights Management and My Rights screens.
 - #11613:  Added visual tags for the four types of rights (read, create, update, delete), positioned between the toggle switch and the right title.
 - #11619:  Profile Rights Comparison : Adding a column "All profiles" to bulk edit profiles from comparison view, without saving for the moment.
 - #11093:  The profiles header section of Rights Management is fixed on scrolling.
- Bug fixes:
 - #11609: Now switch between 'My Rights' and 'Right Management v2' doesn't cause an infinite load of data.
 - #11610: The "Expand all" toggle is now available to any user.
 - #11121: Shipment day filter now correctly filters production time lag rules.

Products

Price schedule

- Bug fixes:
 - #14193: Sites excluded from the tariff markup grid now show price list prices instead of mark-up prices.

Products administration

- Features:
 - #17582:  Display product category in product list.
 - #17582:  Add mass update action to attach product category to products.
 - #17582:  Add filter for product categories.

Recipes

Recipes management

- Bug fixes:
 - #11445: Fix grammage calculation for piece-based ingredients so the ratio applies to quantity or weight-per-piece depending on the Fixed flag.

Recipes

- Bug fixes:
 - #10931: Fixed an issue that occurred when creating a recipe variant and switching to simulation mode: the current variant is now correctly displayed in the UI.

Customers

Customer contracts *BETA screen, not available yet*

- Features:
 - #11593:  Add unlink sites API to remove sites from contract and enable the delete button in list sites screen.

Order cutoff schedules *BETA screen, not available yet*

- Features:
 - #10745:  Added the panel for editing default order cut-off times by meal type.
 - #10746:  Delete default local schedule to restore parent site inheritance.

Sales

POS data

- Features:
 - #10706:  Products received from POS systems are now integrated using the POS products import.

Menus

Menus

- Bug fixes:

- #11361: Label are now displayed correctly when editing report from menu.
- #17308: Fixed an issue where the menu template's parent template was not selected in the update dialog.

Menu templates

- Bug fixes:
 - #11269: Fixed an issue where the default menu template was generating constantly

Menu pre-design

- Features:
 - #16329: ✓ View full recursive composition of a recipe: eye icon on a recipe opens a right-side panel showing the entire tree of sub-recipes, variants, and ingredients down to the deepest level, with type labels (R, SR, G, P) and tooltips.
 - #16328: ✓ When duplicating a menu plan whose start date has passed and end date is in the future, it is now possible to select a start date in the past for the new plan. The dates that can be selected as the start date are those for which the period between that date and tomorrow does not exceed the total duration of the original plan. Other past dates are automatically greyed out and cannot be selected. The end date of the new plan must be in the future.

Supplier orders

Order preparation

- Bug fixes:
 - #12926 : Fixed a rounding issue that incorrectly caused an error message to be displayed regarding non-compliance with the order multiple.

Supplier orders

- Features:
 - #11178: ✓ Add new fields and filters to timestamps and for-EDI APIs.

Production

Finished Product Production Plan

- Bug fixes:
 - #11017: Recipes now appear in the correct production workshop when child sites override the default production workshop.

Shipment

Site supply

- Bug fixes:
 - #11535: Fixed a bug that caused an error message when sending delivery notes that the stock was insufficient.
 - #12928: Stock is now impacted when you ship a specific batch in the site orders and Production batches are now able to be sent

Stock

Known losses and markdowns

- Features:
 - #12978 : ✓ Addition of a panel displaying details of a loss.
 - #12882 : ✓ If a user attempts to create a loss reason that already exists but had been deactivated, easily now suggest reactivating that loss reason.

Inventories

- Bug fixes:
 - #17366: Correction of the display of storage areas in filters.

Tools

Imports / Exports

- Features:
 - #10739: ✓ A new scenario is available to update Units extld
- Bug fixes:
 - #17543: Fixed an issue preventing the supplier products import from working.

Interfaces

- Features:
 - #16322: ✎ Modification of the MaCantine interface to comply with the new Ma cantine 2026 specifications: changes to field labels and addition of fields to highlight fair trade products.

Mapal OS

- Features:
 - #10701 : ⚠ Add endpoint to handle pos-product files from data mapal-bus event V2 using Azure blob-storage.
 - #10701 : ⚠ Add endpoint to handle pos-sales files from data mapal-bus event V2 using Azure blob-storage.
 - #10701 : ⚠ Add endpoint to handle losses files from data mapal-bus event V2 using Azure blob-storage.
