

# Easily 0.755.0

2026-03-24 10:16:01

*The changes and bugs corrected in version 0.750.1 are included in this version.*

## General

- Features
  - #20977: (v.0.750.1) ✓ Add high priority threshold configuration parameter (Ideos).
- Bug fixes:
  - #11208: Now unbreakable space was replaced by normal space in i18n fields.
  - #21015: Globally fix performances issues related to multilingual data.
  - #37176: ✎ Fixed Content Security Policy header for Pendo integration.

## Home

- Features:
  - #20819: ✓ The message addition button has been moved; it is now more clearly labelled (" + Message") and is located in the message area.
  - #20819: ✓ The message's creation date and last modification date are now visible in its edit window.
  - #20831: ✓ Deleted messages now use soft deletion instead of being permanently removed from database

## Sites

### Site settings

- Features:
  - #18882: ✓ Added controls before site move

### Calendars

- Features:
  - #20812: ✓ Added default period type "Bank holiday - No supplier delivery" for supplier delivery availability.

## Products

### Suppliers

- Features:
  - #20813: ✓ Location tags have been added to the 'Supplier Profile'. In this version, these tags do not yet have any effect. They will be used in future to manage situations where public holidays are not the same for all suppliers (public holidays vary depending on the town or region).

## Recipes

### Smart Yield

- Bug fixes:
  - #20797: Improved understanding of the percentage to be entered in the 'Rule Impact' field: field renamed and text enriched with examples
  - #21011: Cancel button now works as expected in both Create and Edit cases.

## Customers

### Customer contracts BETA screen, not available yet

- Features:
  - #11587:  Associate sites to a contract: manage linked sites in one panel (checkboxes, save to link/unlink).

## Menus

### Menus

- Features:
  - #20835: ✓ add recipe.id and recipe.qtyPerPerson fields to GET /menus/site/:idSite/from/:fromDate/to/:toDate API.

### Menu quantities v2

- Features:
  - #10985:  Prevent update of headcount ordered quantities using deadlines from Order cutoff schedules.
  - #10985:  Add a right to bypass Order cutoff schedules' deadlines.
- Rights changes:
  - #10985: ✓ The right Allow to upsert new quantities bypassing order cutoff schedule restriction has been added.

### Menu pre-design

- Bug fixes:
  - #14686: In the contextual error panel, Smart-Specification rule detail can be viewed by non-owners (in read-only mode).

## Supplier orders

### Supplier orders

- Bug fixes:
  - #11401: The billing address, delivery address and comments are now saved upon any changes.

- #11208: Now table show all columns.

#### Supplier invoices

- Bug fixes:
  - #17460: Improve performances of invoice-line API.
  - #12848: The search now applies to the references of Invoices to be received) and Supplier invoices.

## Stock

#### Stock removal

- Bug fixes:
  - #11408: Now product replacement list all products when desired.

## Tools

#### Imports / Exports

- Features:
  - #20778: ✔ Added support for additional fields in fieldsNotToUpdate option for Site and Supplier imports, allowing selective exclusion fields from updates.
  - #20618: ✎ Reduced cognitive complexity of smart yield rules import SQL by extracting CTEs into ideos template partials and centralizing constants.
  - #20614: ✔ Added menu-quantities import.

#### Interfaces

- Features:
  - #17588: ✔ The Ma Cantine interface now also takes into account products with an origin whose external code is FRANCE when calculating the total value of purchases of French origin. "Previously, only products with a certification label with external code FRANCE, LOCAL or SHORT\_DISTRIBUTION were counted.
  - #16353: ✔ Add a link between "Mealtype" and "StockMovement" on automatic StockMovement's creation from customer-order point of sale JES interface.
- Bug fixes:
  - #20770: ✎ Fix ouilink interface establishment\_code mapping. The site wasn't retrieved correctly because the establishment\_code field was in root of the invoice instead of json\_content object field.
