

Easily 0.760.0

2026-04-13 15:46:48

The changes and bugs corrected in versions 0.755.1, 0.755.2 and 0.755.3 are included in this version.

General

- Features:
 - #20825:  Added extId to the units list API.
 - #11202:  Replace the Node-sass dependency with Sass.
 - #20825:  Added extId to the ranges list API.
 - #43291:  Upgrade kitten-mq to 0.14.0 (to include open telemetry support)
 - #39547:
 -  Add "unassigned" temporary module for currently unregistered routes
 -  Update sync script to block when new route not registered in allowedPages file
 -  Add pre-commit hook to check unregistered routes
- Bug fixes:
 - #43298: (v 0.755.2)  Fix database restore for 0.755.0. The tag_verif_type_array function definition was missing search_path. When pg_restore is used, the search_path is set by pg_dump to pg_catalog.set_config ('search_path', '', false) leading to an error restoring the Supplier table (relation "Tag" does not exist). (See migration 20260331111410)
 - #43539: (v 0.755.3) Fixed missing translations for languages other than French.
 - #20939: Improved performances for endpoint GET /supplier-products/site/:idSite.

Sites

Site settings

- Features:
 - #20775:  Add an option to specify the source of data used to generate supplier invoices.
- Bug fixes:
 - #38593: Now if option "Recipes are by default stored finished products when they are created" is set in database, option "This site is a supplier for other sites" is automatically set as well.

Calendars

- Features:
 - #20814:  Migration to copy calendar data from a config into PeriodCalendar table (supplier bank holiday period type). This created new calendar periods on "period-calendars" page.

Rights Management BETA screen, not available yet

- Features:
 - #21004:  UX improvements to the screen to help users understand the settings. Now:
 - pages are enabled via a toggle switch,
 - actions are enabled via a tick box,
 - the border colours (black/blue/green) allow users to quickly identify pages where actions are disabled/partially enabled/fully enabled.
 - A counter shows the number of open actions for each page.
 - #17521:  UX improvements to the screen: several renamings ("Rights Management", "Profiles", "Comparator", "Available from version") and removal of page descriptions and redundant actions that duplicated the titles.
 - #20837:  Added a new option to import rights from a CSV file and replace existing profile rights.
 - #20836:  My Rights now shows all rights for allowed screens (enabled or disabled) and stays accessible once beta is removed.
- Bug fixes:
 - #42862: Fixed a display bug: Sticky content header now displays above scrolling module cards.

Products

Products administration - V2

- Bug fixes:
 - #17523:  Enabled infinite scroll in ingredient select in order to be able to see all ingredients related to the search.

Price lists

- Bug fixes:
 - #19488:  Implemented fallbacks to avoid ownership errors on drop temporal table on pricelists import from excel file.

Suppliers

- Features:

- #20790: ✓ New API endpoint GET /suppliers with multiple filters: label, isActive, codeInternal, extId, type, siret, refSiteOfSupplier, idSiteOwner, extData, supplierUniverse, supplierType.
- #20790: ✓ Added new fields to GET /suppliers/site/:idSite endpoint.
- Rights changes:
 - The right « Get the list of suppliers » has been added.

Recipes

Recipes management

- Bug fixes:
 - #11335: ✓ Changed decimal precision of recipe report fields gross and net quantities from 3 to 4 in order to have the same precision as frontend recipe screen and don't lose precision.

Smart Yield

- Bug fixes:
 - #20793: Fixed Smart Yield search so the list refreshes reliably after typing or clearing the search field.

Print labels

- Features:
 - #20612: ✓ When creating a print job, it is now possible for labels other than INCO to specify that printing should be carried out by uploading a file (in ODS, XLS, XLSX or PDF format) rather than solely via a designated printer. If this option is selected, a file in the chosen format will now be generated when these labels are printed.
- Rights changes:
 - #20612: The right Generate label report has been added.

Customers

Customer contracts BETA screen, not available yet

- Features:
 - #10638:  Addition of the 'Offering' section to the customer contract definition form. This section allows you to view the list of offering associated with this customer contract.
- Bug fixes:
 - #20982: It is now only possible to create, delete or link items from the contract owner's site. The display of the form header has been corrected when accessing the site from a child site.

Order cutoff schedules

- Features:
 - #10982: ✓ Opening of the new 'Order cutoff schedules' screen. This screen allows you to define default order deadlines, i.e. for each meal service, the cut-off days and times for each menu day. A system based on inheritance, with the option to override settings at site level, ensures simple, quick and consistent configuration. The activated schedules are taken into account in the Menu Quantities screen; they do not affect guest order entry.

Sales

POS data

- Bug fixes:
 - #43663: Now we can import data with double quote and without dish.

Menus

Menu quantities v2

- Features:
 - #10982: ✓ An order deadline check is now performed to prevent the order quantity from being entered if the order deadline (defined in the new Order Cut off Schedule screen) has passed.

Supplier orders

Supplier invoices

- Bug fixes:
 - #38596:  Performance improvement in supplier invoice list.

Production

Production management

- Bug fixes:
 - #43331: Fixed checkbox selection for products with zero production quantity - checkboxes are now disabled when production quantity is 0.

Shipment

Site supply

- Features:
 - #20789: ✓ The GET /sites endpoint supports new optional query filters: status, codeInternal, extId, extData, label, isSupplierSite, params, codeCompany, codeAnalyticalSite, and tags.

Tools

Imports / Exports

- Features:
 - #39009: ⚠ A new 'Calendar' import option has been added to the 'Sites' section.
 - #20775: ⚠ Update to site imports: a column has been added to specify the source of the data used to generate supplier invoices.
- Bug fixes:
 - #43097: 🛠 Added support for the isPreorderAuthorized field in the fieldsNotToUpdate option for supplier imports, specifically for the Supplier_SiteSpecificData table.
 - #43284: Fixed file import problem where ingredient and supplier imports would fail and get stuck in a loop due to a temporary table issue.

Interfaces

- Features:
 - #20912: (V 0.755.1) Protection against duplicate submissions of Service Completed (SF) records.
 - #17869: (V 0.755.1) Protection against duplicate submissions of Legal Commitments (EJ) records
 - #20926: (V 0.755.1) Exclusion of lines with a value of 0 when creating Legal Commitment (EJ) and Service Completed (SF) records
- Bug fixes:
 - #20952: (V 0.755.1) Now previous SFs (Services Performed) of the same EJ (Legal Commitment) are taken into account when complementing the EJ (Legal Commitment)
 - #12980: 🛠 Fixed undefined data in line label, added a Finished/Partial prefix in the SF (Service Performed) label
 - #42653: 🛠 Fixed no longer using invoice id to create EJ (Legal Commitment) line label

Mapal OS

- Features:
 - #10848: ✅ Add ability to unlink an Easylis Entity (site, user and profile) from Mapal-OS.
