

Easilys 0.780.0

2026-06-08 14:58:06

The changes and bugs corrected in versions 0.775.1 and 0.775.2 are included in this version.

General

- Features
 - #38995: ✓ Add debug logs for POS file download
 - #20782: 🔧 Updated dependencies to remove references to the Ideolys NPM registry.
 - #46284: 🔧 Fix some Snyk Cross-site Scripting (XSS) and SQL injection vulnerabilities.
- Bug fixes
 - #46477 (v0.775.1) Fix jobs timeout being limited to 30s, resulting in failed jobs like product flat.
 - #46477 (v0.775.2) Fix an issue that could prevent Easilys from starting if the config key 'APP_DATABASE_TIMEOUT_LONG_QUERY' is not set
 - #46851: 🔧 Fixed the test configuration to prevent MaxListenersExceededWarning errors.

Home

Home

- Features
 - #11241: ✓ A new option, "Display the message in a pop-up with read confirmation when the home screen opens", is now available when creating or editing an information message. When enabled, the message is automatically displayed in a pop-up window when the home page opens and remains visible until the user confirms that it has been read and closes it. This ensures maximum visibility for important communications.

Sites

Site settings

- Features
 - #20775: ✓ The setting "Data source for invoice generation" is now available at site level. This option allows you to choose whether future supplier invoices should be generated using data from the Delivery Note or the Goods Receipt Note, so that the system can be tailored to the practices of each site.

Easilys Analytics

- Bug fixes
 - #20590: 🔧 Fixed an issue affecting pie charts. In some situations where the number of returned rows exceeded the chart limit, label calculations could become inconsistent and display an undefined value.

Rights Management BETA screen, not available yet

- Features
 - #44375: ⚠️ Added a partial state for profile screen switches, improved the visual identification of beta screens, and removed the left border displayed on individual rights.
- Bug fixes
 - #46115: 🔧 Fixed an issue where content displayed in the actions card could disappear when using checkboxes.

Equipment Items

Suppliers

- Bug fixes
 - #43574: 🔧 Suppliers whose referencing period has expired can no longer be associated with the main site.

Interventions

- Features
 - #45097: ✓ The equipment's premise is now displayed in the intervention details and in the e-mails.

Products

Product Administration V2

- Bug fixes
 - #46130: 🔧 Fixes have been made to the display and filtering of supplier products linked to a product. The list now displays supplier products from active price lists more consistently, particularly in cases involving multiple suppliers, finished products, or filters applied to a supplier. Corrections have also been made to the way the list opens to prevent the displayed supplier products from disappearing or flickering.

Customers

Customer Contracts BETA screen, not available yet

- Rights changes
 - #46650: Restriction of access to Customer Contracts pages to users with the Menu capability.

Order Cutoff Schedules

- Features
 - #43186:  Added a Custom Order Cutoff Schedules tab within the order cutoff schedule administration area. This tab prepares access to the management of customized order cutoff schedules for authorized users.
- Rights changes
 - #46650: Restriction of access to Order Cutoff Schedules pages to users with the Menu capability.

Menus

Menu Templates

- Bug fixes

- #20861: ✓ Fixed an issue that could cause the associated food plan to be lost when duplicating certain menu templates. Duplicated menus now correctly retain their food plan on child sites that have access to the corresponding food plan.

Menu Quantities V2

- Rights changes
 - #45353: Added a right allowing users to view and manage planned menu quantities.
 - #45353: Added a right allowing users to view and manage ordered menu quantities.
 - #45353: Added a right allowing users to view and manage billable menu quantities.

Menu Pre-design

- Features
 - #21006: ✓ Menu plans can now be archived to remove them from the main list while keeping them available for reference. A filter allows archived plans to be displayed, and they can still be viewed, simulated, duplicated, or reactivated at any time. Archived plans can no longer be used to impact menus.

Supplier Orders

Order Preparation V2 🚫 BETA screen, not available yet

- Features
 - #42691: 🚫 Added the Order Preparation form (steps 1, 2 and 3).
 - Rights changes
 - #46649: Restriction of access to Order Preparation V2 pages to users with the Supplier Ordering capability.

Supplier Orders

- Bug fixes
 - #46374: 🛠 Fixed the costTotalSupplier calculation to correctly account for the number of billing units per order (nbBillingPerOrder), which was previously ignored.

Receptions

- Features
 - #20776: ✓ When the "Data source for supplier invoice generation" option is set to Goods Receipt for a site, supplier invoices generated from a receipt now use the quantities actually received. Unit prices are retained without intermediate rounding to ensure a more accurate match between receipts and invoices recorded in the ERP.

Control on Reception

- Features
 - #46281: 🛠 Good Receival compliance Kafka payload adjustments folder name now includes the reception date, control task titles are uppercase, static strings are translated into the app default language, `Value` subtask is omitted when there is no answer value, Mapal user ID is included for traceability, and batch number/expiry date are emitted as individual subtasks per batch.

Invoices

- Bug fixes
 - #43814: 🛠 Update the status (with dempotent) of an invoice already created in Orion..

Supplier Invoices

- Features
 - #44992: ✓ Supplier invoices now display their generation source (Delivery Note, Goods Receipt, or Multiple Sources).

Stock

Stock V2

- Bug fixes
 - #11415: When stock removals are performed, expired quantities are now deducted first, so that the quantity of expired stock displayed when hovering over the item is consistent.

Tools

Imports / Exports

- Bug fixes
 - #46058: 🛠 Import `smart-catalog-client-prices` crashed with a P0001 `tag_unicity_check` error when two or more clients in the same CSV share the same label (same kitchen but different delivery rooms), causing both to generate an identical auto-tag label (`AUTO <label>`). The import now deduplicates intra-batch tag collisions (only the first client by `extId` inserts the tag, others reuse its id), and also self-heals stale `extId` values on pre-existing tags..
 - #46480: 🛠 Fixed in the supplier import module where, when importing on a child site, some market commitment data was incorrectly taken from the root site instead of the targeted child site.
