

Easilys 0.790.0

2026-07-15

General

Features

- #47619: 🛠 The Apache Kafka producer now uses compression to reduce network bandwidth usage and uses the operator ID as the partition key to support multiple consumers per message group.
- #47647: ✅ Links to the Knowledge Base, What's New, Terms of Use and Privacy Policy now automatically redirect to documentation in the appropriate language when available.

Bug fixes

- #47487: Improved error handling during report generation.
- #46569: Updated @msw/ng-product-switcher to version 0.9.6 to prevent the Support product from appearing in the applications list.
- #48609: Improved the readability of widget titles in dashboards.

My Rights

Features

- #44548: ⚠ Users who are not Super Admins can no longer modify the permissions of their own profile. Only another administrator can make these changes.

Home

Features

- #17479: ✅ Added a report to track homepage message read confirmations, with filtering options and spreadsheet export.

Bug fixes

- #48271: The information type is now correctly displayed in the "Read more" dialog.
- #48271: Message formatting is now consistent across the message list, the "Read more" dialog and the editor.
- #45814: Users who do not have access to the Home page are now redirected to the first screen they are authorized to access instead of the "My Rights" screen.

Rights changes

- #17479: Added the "View message read tracking" permission, allowing access to the homepage message read confirmation tracking report.

Site Administration

Information

Features

- #47964: ✅ The label of the stock movement restriction option has been clarified to more accurately reflect its actual behavior: "Prevent creation of movements from the Stock screen prior to or on the date of an In Progress or Finished inventory."

Users

Bug fixes

- #47747: 🛠 The root site is now available as a destination when moving a user to another site.

Sales Prices

Bug fixes

- #46805: Recipes can now be assigned to groups on multiple sites without impacting sales prices defined on other sites.

Sites

Rights Management BETA 🚫 screen not yet available

Features

- #44554: ⚠ Improved the usability of the Rights Management profile comparator. Long permission labels now remain on a single line with ellipsis and display their full text on hover. Action icons have been resized and now display their label on hover. Beta and Shared rights indicators are now displayed.
- #44554: ⚠ The profile comparator now clearly identifies your own profile and prevents it from being edited, except by Super Admin users.
- #44554: ⚠ Selected profiles in the comparator can now be reordered using drag and drop.
- #44375: ✅ Search results are now highlighted in Rights Management to make them easier to identify.
- #44548: ⚠ Your own profile is now clearly identified in Rights Management and can no longer be edited, except by a Super Admin.

Bug fixes

- #44375: Fixed an issue that could display a blank page when opening the "My Rights" screen in Rights Management.
- #46584: Fixed a translation issue in Rights Management where "Menu Quantities" incorrectly displayed as "Workforce" when multilingual mode was enabled.

Products

Suppliers

Bug fixes

- #48222: The Network supplier filter is now available in the Products > Suppliers screen.

Recipes

Recipe Management

Features

- #18881: ✓ You can now print recipe sheets for multiple selected recipes in a single operation, using the same simulation options as for an individual recipe sheet. Recipe images are not included in bulk printouts.

Recipes

Bug fixes

- #28645: Recipe lists now return only recipes matching the requested dish and correctly handle pagination, including on sites with large volumes of data.

Label Printing

Bug fixes

- #39010: Fixed an issue preventing the correct selection of food and non-food components when generating INCO labels.

Menus

Menus

Bug fixes

- #44986: Reports now open in a new browser tab.

Menu Templates

Features

- #12920: ✓ Added a bulk action to remove parent links from selected category menu templates in a single operation.

Rights changes

- #12920: Added the "Remove category menus parent link" permission, allowing users to remove parent links from category menu templates.

Menu Quantities

Features

- #48196: ✓ The "Menu Week" report is now always visible in the reports list. A message informs users when a menu must be selected before generating the report.

Menu Pre-design

Features

- #44878: ✓ Services that are not available for the selected day are now greyed out and disabled in Menu Pre-design, preventing users from opening an empty recipe selection.

Supplier Orders

Order Preparation V2 BETA 🚫 screen not yet available

Features

- #43098: 🚫 Added the list of sites to the Order Preparation V2 results page.

Supplier Orders

Features

- #46960: 🛠️ Optimize supplier order with-price update by avoiding unnecessary stock calculation.
- #46961: 🛠️ Optimize supplier order template create/update by avoiding unnecessary stock calculation.

Supervision of Order Dispatch

Bug fixes

- #48791: Fixed two issues affecting supplier orders sent via EDI. Order statuses are now correctly updated after supplier confirmation. Manually resending an order also reuses the existing receipt, preventing duplicate entries in Sent Orders Supervision.

Receptions

Bug fixes

- #46017: Supplier prices are now correctly carried over to receipt lines when generating a remaining receipt following a partial receipt. The same fix also applies to products manually added from the Receptions screen.
- #17497: Fixed an issue that could prevent automatic delivery processing (JOB_DAILY_TASKS) when the quantity entered across batches exceeded the total quantity received for the product.
- #48943: Receipts generated from stock transfers now correctly create a V2 invoice, even when the delivery note number is already in use.

Claims

Features

- #47365: ✓ The "Non-conformity Declaration" report now displays the ordered quantity for each product.

Bug fixes

- #48159: 🛠️ Fixed an issue preventing automatic credit note generation when the delivered price differs from the ordered price for an EDI receipt.

Stock

Inventories

Features

- #48483: ✔ Numeric values exported in the "Inventory (Spreadsheet)" report are now correctly recognized as numbers in spreadsheet applications, with no additional conversion required.

Bug fixes

- #20623: The Inventory Variance report was displaying quantity variance instead of valuation variance because null values were not summed correctly. The Inventory Variance report now correctly displays valuation variances.

Tools

Imports / Exports

Features

- #48869: ✔ New export/product-family API to export product families and subfamilies.
- #46915: ✔ Unification by id/extld for a more user-friendly import for the Menu quantities by mealtype module.
- #46915: ✔ Unification by id/extld for a more user-friendly import for the Customer Order module.
- #46912: ✔ Unification by id/extld for a more user-friendly import for the Product packaging module.
- #46912: ✔ Unification by id/extld for a more user-friendly import/export for the Allergen module.
- #46912: ✔ Unification by id/extld for a more user-friendly import for the Product-family module.
- #46912: ✔ Unification by id/extld for a more user-friendly import/export for the Product nutritional value module.
- #46917: ✔ Unification by id/extld for a more user-friendly import for the Recipe Component module.
- #46917: ✔ Unification by id/extld for a more user-friendly import for the Recipe module.

Bug fixes

- #46664: 🛠 During a partial industrial product import, an empty Y (Packaging Units) column now correctly updates or removes existing packaging units, preventing duplicate packaging units.
- #47901: 🛠 Fixed an issue that could prevent the smart-catalog-client-prices import from completing when a CSV file contained a client whose label matched an existing tag.
- #47721: 🛠 Fixed an incorrect value exported in the lowerDateValid field of the Smart Catalog export, which could cause import failures.

Interfaces

Bug fixes

- #45635: 🛠 Fixed an issue with amount values sent to Orion (net amount vs. scheduled payment amount) that could prevent Service Done validation for certain supplier invoices.
