

Easyls 0.795.0

2026-07-15

General

Features

- #47111 : ✔ New API endpoint to retrieve elements across all sites with filtering by status, owning site, type and label.

Bug fixes

- #48238 : 🛠 The AI Assistant now automatically matches the language of your current session.
- #44720 : 🛠 Hardened validation of user-controlled queries, URLs and report inputs to prevent Snyk security vulnerabilities.

Sites

Rights Management BETA 🚫 screen not yet available

Features

- #44546 : ⚠ Super Admins can quickly open the current environment's Mapal OS profile configuration from Rights Management; a confirmation message can be hidden for subsequent visits.

Recipes

Recipes management TECH INTERNAL

Features

- #11631 : 🛠 Transferring a primitive recipe now also transfers all of its derived recipes and clearly identifies which recipe is blocking the transfer when applicable.

Bug fixes

- #18881 : 🛠 Bulk recipe sheet printing now includes all selected recipes, displays compatible meal elements and the recipe's last updated date in the footer, and correctly applies the "Include non-food components" option so that only food costs are displayed when it is disabled.

Smart Yield

Features

- #47860 : ✔ Added a Yield Coefficient field, allowing Smart Yield impact to be entered either as a percentage or as a coefficient, with automatic synchronization between both values.

Nutrition

Meal plans

Bug fixes

- #46323 : 🛠 Creating a nutrition guideline now rejects the reserved technical meal type "All" (id 0) to prevent its use through external flows.

Menus

Menus

Features

- #48988 : ✔ An icon now indicates whether recipe costs displayed in Menus are historized or calculated in real time, including in recipe details.

Bug fixes

- #46323 : 🛠 Menu creation and updates now reject the reserved technical meal type "All" (id 0) to prevent its use through external flows.

Menu templates

Bug fixes

- #46323 : 🛠 Fixed an issue where meal types were not displayed in menu templates when the reserved "All" (id 0) meal type was used. This meal type is now excluded from selection lists and can no longer be used when creating or updating menu templates.

Supplier orders

Order preparation V2 BETA 🚫 screen not yet available

Features

- #48053 : 🚫 Display the order preparation product list for each site.
- #48058 : 🚫 Added actions to generate orders, select or unselect all products, and filter results by generation status.
- #47363 : 🚫 In the General settings step, dates and calculation source are now pre-filled automatically. The calculation source option (Menus / Site Supply) is displayed only when the required conditions are met.

- #48127 :  Show product alerts for invalid order multiples, unpackable products and missing delivery dates. Products in error cannot be selected.

Supplier orders

Features

- #48997 :  The EDI supplier order list now includes external data, validation ID, payment method label and storehouse external data.

Supplier invoices

Features

- #49093 :  Orion supplier invoice validation now uses the site's configured service done status.

Tools

Imports / Exports

Features

- #46911 :  Unification by id/extld for a more user-friendly import/export for the Product module.
- #46911 :  Unification by id/extld for a more user-friendly import/export for the Supplier product module.
- #46911 :  Unification by id/extld for a more user-friendly import/export for the Generic module.
- #46911 :  Unification by id/extld for a more user-friendly import/export for the Supplier product v2 module.
- #46911 :  Unification by id/extld for a more user-friendly import/export for the Purchase generic module.
- #46918 :  Unification by id/extld for a more user-friendly import for the POSProduct module.
- #46917 :  Unification by id/extld for a more user-friendly import for the Smart Yield module.
- #49094 :  Updated Supplier Product Import/Export documentation and aligned V1 export boolean columns (article_isOrderable, article_isDecimalAllowed) to true/false.

Bug fixes

- #46908 :  Add the idSiteOwner field to the Site Tag import/export.
- #46911 :  Product and supplier-product imports now resolve ADR-11 ids consistently and preserve legacy CSV layouts.

Easyls 0.800.0

2026-08-10

The changes and bugs corrected in versions 0.790.1 and 0.790.2 are included in this version.

General

Features

- #49237:  Upgraded AI Assistant to v6.3.0.

Sites

Rights Management screen not yet available

Features

- #49714:  Added an environment-specific Mapal OS profile configuration URL, allowing development environments to open the sandbox from the Quick Access button.
- #49448:  Added screen and rights filters to the Comparator, allowing filtering by status, introduction version and, for rights, right type.

Equipment items

Dashboards

Bug fixes

- #20654: Fixed the display of actual costs for validated interventions in the Equipment dashboard.

Call for tenders

Call for tenders

Bug fixes

- #20768: Product sorting in a call for tenders now works correctly in alphabetical order.
- #50174: Saving a call for tenders sort configuration using two columns no longer causes an error.

Products

Products administration - V2

Features

- #49667:  Raw weight per liter now accepts values from 300 to 1500 g/L (previously 800–1500 g/L), allowing low-density products (such as ice cream and mousses) to be recorded correctly.

Suppliers

Bug fixes

- #38633: Supplier-site imports now correctly apply the provided referencing-period start date and update both dates on subsequent imports.

Recipes

Recipes

Features

- #47113:  New API endpoint to retrieve recipes across all sites, with pagination and multiple recipe data filters.
- #49667:  For recipes using liters as the production unit, the advisory preparation density range is now 0.3–1.5 kg/L, aligned with the product weight-per-liter range.

Smart Yield

Bug fixes

- #49005: Smart Yield rules without a site criterion now apply to inherited recipes and cascade to child sites; the recipe detail yield tooltip marks site-specific rules with * and inherited rules with **.

Menus

Menu templates

Bug fixes

- #11431: Fixed erratic scrolling in the site selection panel when duplicating a menu template on accounts with a large number of sites.

Supplier orders

Order preparation v2 screen not yet available

Features

- #49707 :  Display the order preparation header for each site, including total needs, total ordered amounts and an option to manually mark the site as completed.
- #43104 :  Generate orders for selected products at site level or across all sites, with a summary panel displayed before confirmation.
- #43117 :  Display detailed product needs in a right-hand panel, including consumption dates and delivery sites.
- #49567 :  Redesigned the product card to display need and to-order quantities side by side, with the product reference, stock summary and a collapsible delivery table.

Supplier orders

Features

- #49010:  Supplier orders now retain the exchange rates available when they are sent, so reprints and re-edits use the same rates instead of current ones.

Bug fixes

- #47169: A database error no longer occurs when adding a product to an order when it is referenced by multiple price lists valid for the same supplier and delivery date.
- #49890: EDI supplier-order list pagination now returns full pages according to the limit/offset parameters, even when some orders are excluded after filtering.

Receptions

Bug fixes

- #49441: PUT /receipt/idReceipt now correctly updates the product unit supplier price when it is manually modified in a receipt.

Shipment

Administration of control dishes

Bug fixes

- #44142:  Fixed missing control dishes in packaging/shipment reports by changing sample-line eligibility to use aggregated quantities per grouping (site/date/meal type/dish) instead of filtering each raw menu line (realQtyMenuElement >= 2) before consolidation. This resolves cases where quantities were split across multiple lines (e.g., 1 + 1) and were incorrectly excluded.

Stock

Known losses and markdowns

Bug fixes

- #46977: The material cost of a loss validated (destocked) after its loss date is now correctly calculated even when the loss date falls before the JOB_COMPUTE_COST_SALES_LOSSES_ON_HOW_MANY_DAYS_IN_PAST look-back window.

Inventories

Bug fixes

- #48893: Fixed blocked scrolling in the inventory product list on mobile, in both portrait and landscape modes.

Tools

Imports / Exports

Features

- #48900:  Supplier product client price imports can now define the orderability of each supplier product individually.

Bug fixes

- #48787 (V0.790.1) :  Fixed a timeout issue that could occur when importing supplier-site associations from large files using only extIds.
- #48851 (V0.790.1) :  Fixed a timeout issue affecting large extId-only pricelist imports caused by a SQL performance regression introduced in version 0.785.
- #49853 (V0.790.2) : Fixed an empty tag ID causing an invalid integer conversion during EasyLink order import, resulting in massive PostgreSQL log growth and eventually filling the server disk.
- #49449 : Improved supplier import performance.
- #49449 : Improved import performance for large recipe and recipe-component files by resolving entity identifiers only once.
- #49449 : Improved import performance for large menu-quantities and menu-quantities-by-meal-type files by resolving entity identifiers only once.
- #49449 : Improved import performance for large site-tag files by resolving entity identifiers only once.
- #49449 : Improved import performance for large client-site, generic, product-nutritional and product-packaging files by resolving entity identifiers only once.
- #49449 : Improved import performance for large site, site-address and site-dynamic-parameter files by resolving entity identifiers only once.

Easyls 0.805.0

2026-08-25

The changes and bugs corrected in versions 0.790.3 are included in this version.

General

Features

- #47580:  Added the quality extld to the GET /qualities response.
- #50467:  Added SCSS source maps to identify the source files of compiled CSS rules.

Bug fixes

- #50394 (V0.790.3): Fixed numeric cast errors caused by empty strings in the /customer-order/recipes API.
-  Fixed translation placeholders broken by Lokalise by migrating from %name% to [%sname] format.
- #50686: Fixed a server crash that could occur when validating access rights.

Sites

Rights Management BETA screen not yet available

Features

- #49684 :  Improved the copy-rights modal with clearer warning styling, a correctly sized profile list, an emphasized profile name and confirmation after a successful copy.
- #50196 :  Fixed the Rights Version filter to use rights creation versions instead of screen versions in the Profile and Comparison tabs.

Recipes

Print labels

Bug fixes

- #26752:  Fixed an intermittent issue on the INCO label printing screen that could cause ingredient origins and DLC data to be missing. The simulator configuration is now reliably restored on page load and consistently used for both table data and the report button.

Menus

Menus

Bug fixes

- #46793: Improved menu cost history job performance by reducing unnecessary intermediate data processing on large datasets.

Menu templates

Bug fixes

- #11171: Removed the deprecated report used to compare multiple menu templates.

Headcount entry

Features

- #47942:  Added the "Consolidated Multi-Category" report to the Headcount entry screen, with the same generation options as the report available from the Menu screen.

Menu pre-design

Features

- #20951:  The recipe detail drawer now displays the full hierarchical composition, including sub-recipes and sub-sub-recipes, together with consolidated allergens and their icons, and any Smart Specification conflicts.

Supplier orders

Order preparation

Features

- #44650:  A delivery date falling on a supplier or delivery-site bank holiday can now be forced and retained. A contextual error message identifies the affected supplier or delivery site, location and date. The order still cannot be sent or validated with that date.
- #39005:  Delivery-site localization is now also taken into account when determining delivery dates that are unavailable due to bank holidays.

Order preparation V2 BETA screen not yet available

Features

- #43109:  From the order preparation results page, users can open the same reports as in classic order preparation from the right-hand panel. The list is filtered by the selected site and follows the same V1 availability rules, including reports available from delivery notes.

- #43123: 🛑 On the order preparation results page, products for the selected site can now be searched by name, filtered and sorted from a new right-hand panel.

Supplier orders

Features

- #39005: ✔ Delivery dates are now rejected when a bank holiday applies to either the supplier or the delivery site, including orders sent by EDI.

Bug fixes

- #50826: 🛠 Fixed worker crashes (SIGABRT) and severe slowness caused by dashboard-cube API saturation.

Tools

Imports / Exports

Bug fixes

- #49801: Fixed duplicate lines in the supplier-product-v2 export when a supplier product belongs to multiple price lists, for example a current and a future one.

Interfaces

Features

- #49415: ✔ Orion — the generated reception-note PDF is now attached to the Service Fait (SF), alongside the supplier-order PDF and any uploaded receipt documents.

Bug fixes

- #49614: LightSpeed — Fixed a synchronization blockage: SKUs exceeding the INT32 limit are now skipped so they no longer block the entire process, and each affected line is logged as a warning.
