

Easilys 0.810.0

2026-09-07

The changes and bugs corrected in versions 0.805.1 and 0.805.2 are included in this version.

General

Features

- #49201:  Implemented the technical architecture enabling asynchronous execution and tracking of long-running tasks in Easilys.
- #50828:  Performance optimization work on order status and delay checks.
- #51137:  Rights are now grouped by functional screen, while technical rights shared across multiple screens are grouped under a "Transverse" section.

Bug fixes

- #51542 (V0.805.2):  Fixed an issue that could display a blank page in Easilys when full Mapal OS login was enabled.

Rights changes

- #49201: Added the GET /async-tasks, GET /async-tasks/#, PUT /async-tasks/#/acknowledge, and PUT /async-tasks/#/retry actions to the Home page, allowing users to track and interact with their own asynchronous tasks.

Site parameters

Users

Features

- #49416:  Move User is now available for environments connected to Mapal OS — previously blocked there — but only to virtual sites (real-site assignment stays in Mapal OS). For environments not connected to Mapal OS, which previously offered only real sites, virtual sites can now be selected too, marked with an icon showing the virtual tree name on hover.

Sales price

Bug fixes

- #50154: Disabled recipes can no longer be added to a recipe group in Sales Price Management.

Sites

Rights Management BETA screen not yet available

Features

- #49427:  The Comparator now allows users to display only rights that differ between the selected profiles.
- #49458:  The Comparator allows administrators to search for screens and rights by label.
- #11620:  Changes made in the Comparator can now be saved.

Bug fixes

- #51029: Profile rights can now be saved when the environment is connected to Mapal OS.

Equipment items

Interventions

Bug fixes

- #49400: Notification emails are no longer sent when the notification option is disabled, even when recipients are configured.

Call for tenders

Call for tenders

Bug fixes

- #43546: Suppliers can once again update tender prices using an Excel file.

Recipes

Recipes management

Features

- #50906:  Exposed the sub-recipe identifier in recipe component payloads for read, create, update, and duplicate operations.
- #50907:  In edit mode, a sub-recipe can be opened in a new browser tab.
- #50908:  In simulation mode, sub-recipes can be viewed directly within the recipe in read-only mode.
- #51046:  In edit mode, you can now open a sub-recipe in a new tab by clicking on the dedicated edit icon.

Sales

POS data

Bug fixes

- #48984: Stock withdrawals from POS sales now use the supplier product that actually holds stock, even when it is stored in a different unit than the one requested, instead of driving an emptied supplier product further into negative stock.

Menus

Menus

Features

- #46029: ✓ Menu reports now consistently display allergen presence and allergen traces.

Menu quantities v2

Features

- #51166: ✓ An information message now explains the content of the Consolidated Multi-Frame Menu report.
- #47943: ✓ The "Daily Menu A4" report is now available from the headcount entry screen.

Menu pre-design

Bug fixes

- #48213: 🛠 Recipe search could sometimes fail to display all available recipes. This issue has now been fixed.

Supplier orders

Order preparation v2 BETA 🛑 screen not yet available

Features

- #49421: 🛑 Improved UI of form step 1.
- #48244: 🛑 Simplified sites selection in form step 2.
- #48245: 🛑 Improved UI of form step 3.

Claims

Bug fixes

- #50762 (V0.805.1): 🛠 EDI receipts from supplier orders now correctly generate a draft claim when an upward price difference exceeds the defined minimum compensation threshold. Until now, an issue prevented this claim from being created for receipts generated from EDI supplier orders.

Supplier invoices

Bug fixes

- #51578: Fixed an issue that could duplicate an invoice when the "Associate" action was validated multiple times quickly.

Supervision of order dispatch

Features

- #32104: ✓ The order supervision screen can now display unsent orders and, by default, shows the sites in the relevant filter.
- #26205: ✓ Users can click on an unsent order to open the order basket details in a new browser tab. The order number column is right-aligned.

Shipment

Packaging and logistics

Bug fixes

- #48826: 🛠 Delivery note quantities and products are now correct, including when the report is generated without a Site filter.

Stock

Known losses and markdowns

Bug fixes

- #48984: Losses and breakage now withdraw from the supplier product that actually holds stock, even when it is stored in a different unit than the one requested, instead of driving an emptied supplier product further into negative stock.

Management

Management

Bug fixes

- #50765: Fixed initial and final inventory amounts that ignored negative stock, causing differences with Stock management V2.

Tools

Imports / Exports

Features

- #45000: ✓ The Supplier-Tag Link import now supports Supplier Network and localization tags, including automatic creation of missing tags.
- #49800: ✓ Pricelist exports can now be filtered by the current owner site.

Bug fixes

- #48865: 🛠 The V1 supplier product import now preserves an infinite start date when no start date is provided, instead of setting it to the current date.
- #49826: 🛠 Performance improvements for price list imports, mainly for date and site validation.
- #51747: 🛠 Improved import performance for large files (supplier-product-v2) by resolving entity identifiers once.
- #48131: Sales or loss imports are no longer generated when they contain no data.

Interfaces

Bug fixes

- #51768: Fixed an issue that could randomly fail Lightspeed interface sales imports.
